

# OPTENET SOLUTIONS FOR THE ENTERPRISE

## INTELLIGENT CONTENT SECURITY FOR THE ENTERPRISE

A COMPLETE SET OF INTEGRATED, CARRIER-CLASS SECURITY PRODUCTS DESIGNED TO PROTECT COMPANIES FROM ALL INTERNET AND EMAIL THREATS IN A WEB 2.0 WORLD

### Who should use Optenet Security Solutions?

Companies with distributed organizations.

Enterprises that need to streamline and simplify security.

Organizations looking for the highest level of protection from threats and inappropriate content.

*Optenet Solutions for the Enterprise is a fully integrated set of security services ranging from antispam, antivirus, antiphishing, web filter, peer-to-peer and instant messaging that provide enterprises with the highest level of security protections while dramatically lowering the TCO around deploying and managing content security. Available in four preconfigured packages: Optenet NetSecure™, Optenet WebSecure™, Optenet MailSecure™ and Optenet WebFilter™ provide enterprises with the right mix of security protections to fit their security needs and their budget.*

### WEB 2.0 FULL PROTECTION

Optenet Solutions for the Enterprise offers full protection against next generation web, mail and other Internet threats.

Web 2.0 and the proliferation of dynamic content provide new avenues for today's advanced hackers to harm or attack precious electronic assets. Using the most advanced and comprehensive set of real time content analysis techniques, along with industry leading malware signatures, Optenet fully integrated set offers companies the most effective real time protections against harmful attacks.

### OPTENET'S TECHNOLOGY ADVANTAGE

At the heart of every Optenet solution is the **Carrier Class Optenet Transparent Traffic Analyzer (CCOTTA™)** which provides real-time processing and coordination of all network traffic. Whether configured in bridge, proxy or router mode, CCOTTA™ works in the background, routing the traffic to the proper security service (antispam, antivirus, web filter, etc.) per the defined security policies. By sending only the required traffic to the designated security service, CCOTTA™ provides the basis for Optenet's unsurpassed, industry-leading performance and scalability.

Optenet's products are developed to work together and share state-of-the art technology to provide customers the highest rate of accuracy and dynamic protection for the new

Web 2.0 world. Powerful tools include its built-in **Multicontent Inspection and Dynamic Analysis System (Optenet MIDAS™)** and **Global Intelligence Acquisition Network for Threats (Optenet GIANT™)** which provides real-time management of known inappropriate content.

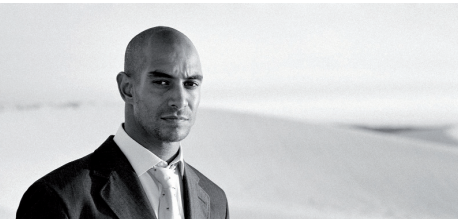

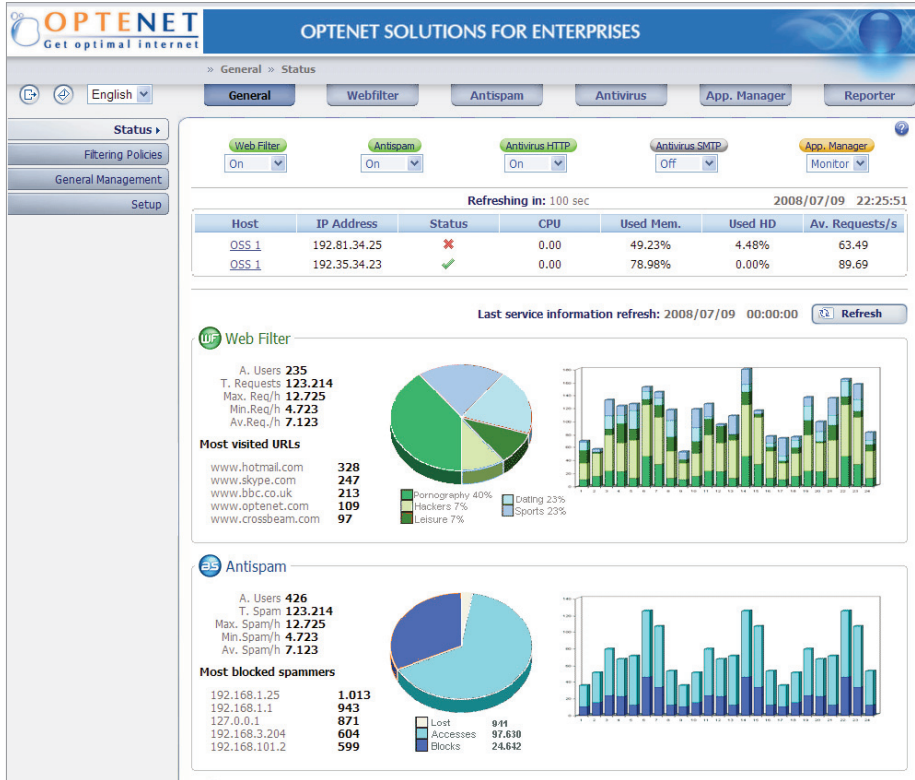

**Real-time monitoring**

All of Optenet's enterprise solutions include the fastest real-time monitoring and reporting system available. The reports – supported by a database incorporated into the solution without the need for additional licenses – can be customized for the Enterprise needs. In an instant, the administrator can access data about everything from bandwidth consumption and productivity to Internet resource management by users or user groups.

**Central management and distributed operation**

Through a single simple-yet-powerful management console, policy management for multiple locations and multiple machines is effortless. Email administrators can use the console to define and execute unlimited blocking policies, applicable on a global scale, independent of the network infrastructure.

**ABOUT OPTENET**

Optenet is a global IT security company that provides high-performance security solutions to service providers and large enterprises worldwide. Optenet's technology protects 75 million end users around the globe, including customers of many of the world's leading ISPs and mobile operators, as well as employees of global enterprise organizations. The Company is a socially conscious organization, committed to eliminating illegal content on the Internet, protecting children and supporting government agencies and non-profit organizations that share the same goal.
